Stores data in tables
They are relational
Good for structured data

Nosql DB

```
var User = new Schema({
  local: {
    name: {
      type:
    },
    username: {
      type: ,
      index:
    },
    email: {
      type:
    },
    password: {
      type:
    },
    isAdmin: {
      type: ,
      default:
    }
  }
});
```

Stores data in JSON documents
They are not relational
They are good for complex data
